

UV bottle filling station
DPD delivery depot

“Waterlogic have assisted us in reducing our single use plastic reliance and helping with our mission to be the most sustainable delivery company on the planet.”

OLLY CRAUGHAN, CORPORATE SOCIAL RESPONSIBILITY MANAGER

Background

DPD are one of Europe’s leading parcel groups and are wholly owned by France’s La Poste, the second largest postal group in Europe. They are the UK’s favourite parcel delivery company - providing innovative, high quality and time sensitive solutions. The DPD UK team exceeds 15,000 people, operating over 10,000 vehicles from 84 locations and delivering over 260m parcels a year.

DPD were looking for a way to reduce the amount of single-use plastic bottles used throughout their Hubs and Depots. They required a dispenser that could produce high volumes of water, time after time, to cater for all their staff based at each site. They needed something that could fill large reusable bottles quickly and consistently, reducing queueing times and provide easy access to great tasting water throughout shifts. It was also important to find a solution that helped promote the sustainability initiatives internally across their locations.

Waterlogic worked with DPD facilities, their UK CEO and marketing team to find the ideal solution.

Solution

“The team at Waterlogic recommended their UV bottle filling station with a fully customisable wrap; this was ideal in helping us promote our internal sustainability initiatives to staff across our locations. It also comes with a handy bottle saving counter display which allows us to keep track of how many single-use plastic bottles we’ve saved.

“We estimate, based on our people filling up on average twice a day over five days, that 3.75 million plastic bottles of water will no longer be needed.”

“The UV bottle filling station also comes with the bonus of UV sterilisation and automatic dispensing which provides that extra peace of mind when it comes to protecting our staff from potential water contaminants and the spread of bacteria from hands and drinks bottles.

“Waterlogic worked well alongside the DPD team to ensure a seamless, confidential nationwide install in time for our launch event. They worked with our external contractors to ensure all additional, supporting work was done before the build, allowing them to install the initial 15 machines in one weekend with minimal disruption.”
